## **Frequently Asked Questions About French Doors**

---

### **Why Do They Call It a French Door?**

---

French doors originated in 17th century France during the Renaissance, an era of new ideas in architecture and art. During that period, [French doors](#) began as just large windows designed to open for use to step onto a balcony.

The windows were made of wood and wrought iron; then the French started adding more glass into their architecture, including the large windows. That brought in more natural light for more hours daily, and interior rooms could be separated by the French doors to let light flow between them too.

The oversized windows became known as French doors, and by the late 1600s, they were in use in other European countries. Today, French doors are very popular in the U.S. and are available in many choices of styles and materials for use in almost any area of the home.
