Quality Exterior French Doors from Energy Shield Window & Door Company

Are you looking to make a grander entrance into your home or a statement with the door outside to your patio? There are no better options than the outdoor French doors manufactured at Energy Shield Window & Door Company. These beautiful doors offer a practical and unique way to create an elegant pathway between rooms or from the inside to the exterior of your home. Even when closed, our French styled doors add style, and function for any exterior or interior door in your home, while offering a clear, open view with highly energy efficient glass. Choose from custom made patio doors, fiberglass, or aluminum. In addition, you can be sure that all of Energy Shield Window & Door Company products feature the industry standards for:

- Air infiltration
- Structural performance
- Thermal performance
- Forced entry
- Water penetration

You can rest assured that [installation of your exterior French doors](#) will always be completed properly, and will help to ensure that your home is more energy efficient, resulting in the substantial reduction of your energy bill by up to twenty percent.

Every one of our windows and doors, including our hinged patio door styles, are Enviro-Sealed and have Eco-View windows and glass, which are backed and certified by [Energy Star](#), and AAMA. Bring the beauty of the Arizona desert into your home without risking your heating and cooling efficiency with beautiful, Energy Shield Window & Door Company high quality custom French doors.

French Doors for High Style and Functionality

If you want the openness of the multi-sliding door design but prefer another approach to adding multiple glass doors to your home, consider elegant French Doors. There are a variety of beautiful and functionally advantageous French Door configurations.

Your new French Doors can be custom designed, and you can select from these basic operational types of French doors for your home:

Both Sides Operable	Both sides of your French Doors can be hinged to open outward or inward into the room. They can even be framed to swing in or out from the center of the doors.
Swing Inward vs. Swing Outward	You can have your French Doors hinged to swing inward into the interior of the room in your home or outward to make more use of the interior space.
One Operable Door Panel	If you want to limit the amount of usable floor space needed for your French Doors to swing, a single-hinged door allows one side to open and the other to remain stationary.

Material Types of Exterior French Doors

Energy Shield uses only the most durable and energy-efficient framing materials for our superior-quality French Doors for southwest desert homeowners, including:

Vinyl Framing

Energy-efficient high-grade vinyl French Doors offer durability and the appearance of painted wood at affordable pricing. Use different colors for each side, as desired.

Wood Framing

Wood-framed French Doors offer a traditional aesthetic that warms up the interior and exterior and elevates the image of any home.

Aluminum Framing

Aluminum framing with vinyl cladding adds energy efficiency and withstands the elements of the harshest climates.

Types of Glass in French Doors

Beautiful glass treatments can add flair and elevate the aesthetic of your French patio doors, and they obscure the view ideally to preserve your privacy. Decorative glass options include:

Frosted

Textured

Etched

Divided Lights vs. Grilles

If you decide to buy French Doors, there are a few ways that the look of individual glass panes (called lights) can be achieved in your new doors:

Actual Divided Lights: Individual lights (glass panes) separated by framing material offer the authentic appeal of traditional French Door construction. But, these are harder to clean.

Grille on One Side of the Door: A grille attached to the outside of the glass provides a convincing image of divided lights. These are conveniently removable for cleaning.

Faux Grille Inside the Glass: A grille-like material can be placed between the two full panels of glass in a double-pane French Door to create the appearance of an external grille.

French Door Light Styles

Aesthetic designs for the glass panels in Energy Shield's stunning, world-class quality French Doors are available to suit all the most popular home styles, such as:

Colonial Victorian Craftsman

Tudor Contemporary Prairie

Frequently Asked Questions About Exterior and Interior French Doors

Why Do They Call It a French Door?

French doors originated in 17th century France during the Renaissance, an era of new ideas in architecture and art. During that period, French doors began as just large windows designed to open for use to step onto a balcony.

The windows were made of wood and wrought iron; then the French started adding more glass into their architecture, including the large windows. That brought in more natural light for more hours daily, and interior rooms could be separated by the French doors to let light flow between them too.

The oversized windows became known as French doors, and by the late 1600s, they were in use in other European countries. Today, French doors are very popular in the U.S. and are available in many choices of styles and materials for use in almost any area of the home.
