

Vinyl Windows in Arizona

 energysieldwindowsanddoors.com/vinyl-windows-arizona

Vinyl Windows are the Most Energy Efficient Choice for Windows in Arizona

Over the past decade vinyl has become the frame material of choice for replacement windows and doors as well as for new construction. With Federal Energy Codes becoming stricter, energy efficient vinyl has emerged as the top performer. In many parts of the United States such as Arizona, vinyl is one of the few materials that exceeds the minimum standards set by the federal government.

Making the cost-effective investment into vinyl replacement windows is an opportunity to transform your Arizona home or business. That's because the durable vinyl windows offered at Energy Shield Window & Door Company are locally manufactured by us, and designed to improve energy efficiency. Get high-quality vinyl window replacement at the best price by skipping middlemen mark-up dealers, and coming right to the factory. As a valued customer, you can reap the cost-saving benefits of working with a factory-direct window company.

Which Style of Vinyl Windows Are Right for You?

Vinyl windows are not a one-size-fits all product. Each Energy Shield Window & Door product has a strategic design in mind and it's important to discuss which vinyl replacement windows or new home products best serve your goals. Consider these options.

Single Hung Vinyl Windows: Our 7000 Series *opens from the bottom only* and provides a half screen on the lower portion. This allows a natural breeze to flow without compromising your eye-level view.

Double Hung Vinyl Windows: Our 8000 Series enjoys *top AND bottom opening access* and full screens. The windows also enjoy tilt-cleaning capacity.

Single Sliding Vinyl Windows: This 7000 Series vinyl window has *side-by-side windows, and one panel stays stationary and the other panel slides horizontally open.*

Double Sliding Vinyl Windows: This 8000 Series product utilizes **2 side-by-side windows that open via a center slide** that allows you to manage fresh air flows and view flexibility.

Casement and Awning Vinyl Windows: These 9500 Series windows enjoy hinged sashes that use a handle crank to open the window outward. *Casement windows typically open from the side* and *awning windows open up from the bottom* to create ventilation.

Bay Vinyl Window: Bay windows are sometimes referred to as bench seat windows. *They typically consist of 3 windows; 1 fixed window in the center, and 2 side windows that are single or double-hung.* Bay windows are great for expanding your living space, letting in fresh air, and allowing plenty of natural lighting.

Save On Energy Costs with the Best Vinyl Windows in Arizona

Advancements in the chemical compounds that are formulated specifically for windows and doors have made ***vinyl the preferred frame material for Arizona's most prominent home builders.*** Many multimillion-dollar homes in Arizona are constructed with vinyl windows and doors. Replacing your old aluminum or steel-framed windows with state-of-the-art vinyl frames is one of the best investments you can make in your home. You will lower your energy cost while increasing curb appeal and resale value.

How to Replace Vinyl Windows

To replace your windows with new energy-efficient vinyl windows, first contact Energy Shield to schedule your free in-home estimate. Our vinyl replacement windows expert will come to take measurements and discuss your options with you and schedule an installation date. Then, within just a few weeks, your new windows will be ready for installation. Although there are, of course, numerous steps involved in replacing windows

in your home or business, our installation specialists use a very straightforward and transparent approach. So, you will know what to expect throughout the process. Here's all you will need to do for your part of the vinyl window replacement process:

1. Move window coverings, furniture, wall decor, and rugs near the windows, to make room for the window installers to work using the necessary equipment.
2. Outside, move patio and deck furniture, toys, planter pots, and other items away from the windows that are going to be replaced.
3. Trim back vines, hedges, and other plants temporarily, or remove them from the window areas, in order to allow access by the window installers. Turn off timers that control sprinklers near windows and other areas where installers will be working or carrying windows and tools.

IMPORTANT: For safety, children should be kept away from the areas where windows are being installed. Also, pets should be secured safely in a contained area away from where the window replacement work is being done, to protect them and help them stay calm.

Steps of the Window Replacement Process

Our window installation professionals are very respectful of your home and possessions, and we will take all the appropriate precautions to make sure that nothing is damaged in any way during window installations. So, the first thing we will do is protect your floors and larger furniture items by laying down drop cloths. Here's the rest of the process for replacing vinyl windows:

1. Each old window and its framing materials will be removed.
2. Then, the installer will replace the existing framing, shims, and sealants, as needed.
3. Next, the installer will place the new vinyl window into the open frame.
4. Then the installer will level the new window and ensure that it is square in the opening.
5. Flashing nails will be used to secure the new window into place.
6. Waterproof lining will be applied around all your new vinyl replacement windows.
7. Next, additional insulation will be placed around the window.
8. Then, caulking will be added around the window.

Your installer will ensure that every replacement window is fully sealed and seated properly. The installation crew will clean up all areas where work was done, and they will remove all the old windows from your property. The time frame for the entire vinyl window installation project is dependent on the number of windows to be replaced. Typically, windows can be expected to take several hours each to complete, on average. This time estimate includes removing the old window, handling the materials, and completing the installation of the new window.

Vinyl Window Manufacturer

Energy Shield Window & Door Company LLC, in Phoenix Arizona has been building energy-efficient home improvement products for over 25 years. We manufacture all our vinyl replacement windows locally, and we design them specifically to deliver superior performance in the southwest U.S. desert climate. Our premium quality vinyl windows will withstand the extreme conditions of the desert and ideally protect your home for decades to come.

We are Arizona's best vinyl window manufacturers. Energy Shield windows and exterior doors are engineered to provide:

- Maximum heat reflection (low-E)
- Minimum heat transfer (Argon)
- Optimum dust control (meticulous seal)
- Improved noise insulation (in multiple-panel designs)

We install, warranty, and service all window and door products we sell. That means our customers receive the important benefits of buying windows factory-direct from the manufacturer, vs. buying from a retail supplier:

Compare	Buying Retail	Buying Factory-Direct
Pricing	Wholesaler markup (when selling to retailer) Retailer markup. The cost of the retailer's profit is paid by the customer.	No wholesaler markup. No retailer markup. The customer receives the best possible price.
Installation Quality	No factory-trained installers. Some independent installers do not have significant industry training and all are less experienced with the brand.	Factory-trained installers. Installers are fully trained at the manufacturing facility and hold an abundance of industry certifications.
Warranty Servicing	Third-party handling of warranty claims are notoriously fraught with complications and conflicts.	Working directly with the manufacturer on warranty claims eliminates the risk of misinterpretations, confusion, and inappropriate delays and conclusions.
Customer Service	Service from a third-party provider is naturally less predictable than can be expected directly from the brand.	Service directly from the window maker can be expected to be of quality that exemplifies the manufacturer's pride in the brand and the industry.
Overall Workmanship	Quality of the work and customer service is highly variable among independent providers.	Quality of customer service and workmanship in installation, repairs, and warranty management is provided by the manufacturer's own specialists.

We have been building premium-quality energy-efficient windows for over a quarter-century here in the Sonoran Desert of the Phoenix metro area. Our many years of experience and passion for quality have made Energy Shield the best vinyl window manufacturer in Arizona.

And, by eliminating the middlemen, we are able to prevent common problems for our customers that can only be avoided by being able to buy directly from our vinyl window factory.

We're proud to continue providing our customers with the benefits of the very best vinyl windows and customer service our industry has to offer Arizona homeowners and businesses.

Vinyl Window Installation FAQ

What are the benefits of buying my windows straight from the window manufacturer?

The manufacturer is more knowledgeable about exactly what you need, even custom-made windows. By buying directly from us, you will benefit from our product warranties as well as regular servicing. You also avoid having to deal with middlemen who may have marked up the prices to increase their profit margins.

When to replace vinyl windows?
