

Window Installation Process

 energysieldwindowsanddoors.com/window-installation-process/

Careful planning with an **Energy Shield Window & Door Company expert will ensure your new or replacement window installation process is a positive experience and your home improvement project is hassle-free.** While there are many facets involved with the process of replacing your home or office windows, **our approach is straightforward, so you will know exactly what to expect** when you choose superior quality vinyl and aluminum **Energy Shield Windows and Doors** specifically engineered for the extreme Arizona heat.

Our **wide selection of energy-efficient, vinyl windows** are manufactured at our Phoenix, Arizona factory, and are backed by a **Limited Lifetime Manufacturer's Warranty.**

What to Expect During Your Window Installation

Now that you have chosen the perfect new or replacement windows to fit your style and your budget, what comes next?

First, your **Energy Shield** sales representative will work with you to **schedule a time for our friendly, professionally-trained window installer to visit your home or office to take the window measurements** and set up the installation date. Now you're all set to have your new, energy-efficient windows installed! Here are the top 5 questions and answers to help you **prepare your schedule and home for your upcoming home improvement project.**

Preparing for Installation

By preparing for your installation date, you will save yourself a lot of running around and help the project run smoothly. In the days before your scheduled installation, **clear a path to each window that will be replaced, both inside and out**. Protect your belongings and furnishings to make a safe workspace by removing obstacles:

- **Inside** move/remove household items like furniture, rugs, window coverings and pictures or wall hangings to provide plenty of space for the installer and the necessary equipment.
- **Outside** move outdoor furniture, flowerpots and plan ahead to have other obstacles including vines, flowerbeds or hedges trimmed back or temporarily removed from around the windows to provide easy access.
- **Pets** should be safely secured away from the project to keep them protected and calm.
- **Children** should also be kept away from the work areas for their safety.
- **Drop cloths** will be laid down to protect your flooring and larger furnishings. ***Our respectful window installation experts will take every precaution to ensure your home and possessions are not harmed or damaged in any way.***

Do I Need a Construction Permit for Window Replacement?

In Arizona, residential construction permits are only needed when you are remodeling your home or adding an addition. Your **Energy Shield installation expert will detail, when applicable, who will be responsible for permits**. It is also a good idea to **check with your neighborhood HOA** to make sure that your home improvement project aligns with their rules, regulations, and bylaws.

What is Your Installation Process?

- First, the old window and framing materials are removed.
- Next, the installer will replace the framing and shims, as needed.
- The installer will then fit the new window into place and ensure it is level and square.
- Flashing nails will secure the new window in place; then the waterproof lining is applied.
- The critical final step is adding additional insulation and caulking around the window.
- Your installer will ensure the window is fully sealed and properly seated.
- As the project comes to a close, the crew will perform a full clean-up and haul away your old windows.

How Long Will Installation Take?

Timing for the entire project is determined by the number of window to be removed and replaced. On average, **each window will take a few hours with removal of the old window and materials and installation of the new window**. From start to finish, you can **expect a full home window replacement project to follow a two to three-day timeline**. However, if there are unexpected circumstances like additional repairs or uncooperative weather that may delay the completion date.

What Can Extend the Project?

Rest assured that ***our streamlined installation process accounts for foreseen obstacles***, but there are times that unexpected circumstances may extend an installation's timeline. Aside from the bad weather, underlying repair issues may arise if there is unforeseen damage that needs repair. ***Our process will limit your home's interior to outdoor exposure*** because we only remove one window at a time.

Still Have Questions?

Our professional window installers are always happy to answer any question or concern you may have about our **Energy Star** products or the installation process. When your installation crew arrives, be sure to ***point out any special directions or considerations before work begins***. When the installation of your new windows is complete, ***take time to do a walk through with the installer to make sure there are no problems or concerns*** that need to be addressed before the crew leaves.
